

IMPROVEMENTS IN OR RELATING TO PILES AND ANCHORAGESABSTRACTIMPROVEMENTS IN OR RELATING TO PILES AND ANCHORAGES

5 An expandable sleeve (3) for bringing concrete
introduced into a borehole (100) for forming a pile
section into intimate contact with the wall of the
borehole consists of two or more segments (4) which
together make up a closed circumference, which segments
10 are connected by expandable gaskets (5) which allow the
circumference to be increased while maintaining a
closed body. Means (7, 8) for expanding the sleeve (3)
radially are provided within the sleeve, preferably at
intervals along the length thereof.
