Title of Invention: METHOD AND EQUIPMENT FOR INSTALLING A POWER CABLE IN A DEPLOYMENT SITE

ABSTRACT

Method for installing a single power cable span in a deployment site comprising a rail for supporting the single cable span by trolleys, comprising:

- providing a conveyor belt outside of the deployment site, having a plurality of locations set at a predetermined distance one from the other along a longitudinal movement direction of the belt and moving with it;
- repeating the following steps until the single cable span reaches a predetermined position:
    - positioning a first part of a holder at one of the locations;
    - laying a portion thereof on first part of the holder positioned at the location moving with the belt;
    - connecting a second part of the holder to the first one to lock the cable span portion in between;
    - removing the first part of the holder from the location moving with the belt.
