

(I)

(57) Abstract: A novel method of synthesis for the production of initial products for the production of compounds with the general formula (8, 10, 12) is described. In this synthesis, compounds with general formula (4,B) are produced in a microbiological reaction. The meanings of radicals R^7, R^{10}, R^{11}, R^{13}, R^{17} and $R^{17'}$ as well as of the grouping U-V-W-X-Y-Z are indicated in the claims.
