ABSTRACT

Provided are a method, apparatus, device, storage medium, and program product for displaying a voting result, which relate to the field of virtual environments. The method includes: displaying a vote counting area 210 for an action plan, the vote counting area 210 including sub-areas 220 in a candidate state; adjusting the sub-area 220 from the candidate state to a selected state based on a voting signal, a display characteristic of the selected state being corresponding to a support status; and displaying a voting result corresponding to the action plan.
