

ABSTRACT

METHOD AND APPARATUS FOR ENCODING/DECODING IMAGE, AND STORAGE MEDIUM

An image encoding/decoding method and apparatus are provided. An image decoding method according to the present disclosure may comprise obtaining, from a bitstream, a first flag specifying whether joint CbCr residual coding is performed on a first block adjacent a target boundary of deblocking filtering, a second flag specifying whether joint CbCr residual coding is performed on a second block adjacent the target boundary, a third flag specifying whether the first block includes a non-zero transform coefficient level, and a fourth flag specifying whether the second block includes a non-zero transform coefficient level; obtaining a reconstructed picture; determining the target boundary in the reconstructed picture; and applying deblocking filtering to the target boundary based on the boundary strength.
