(54) Title: COLLAR AND BRACE FOR PEDESTAL

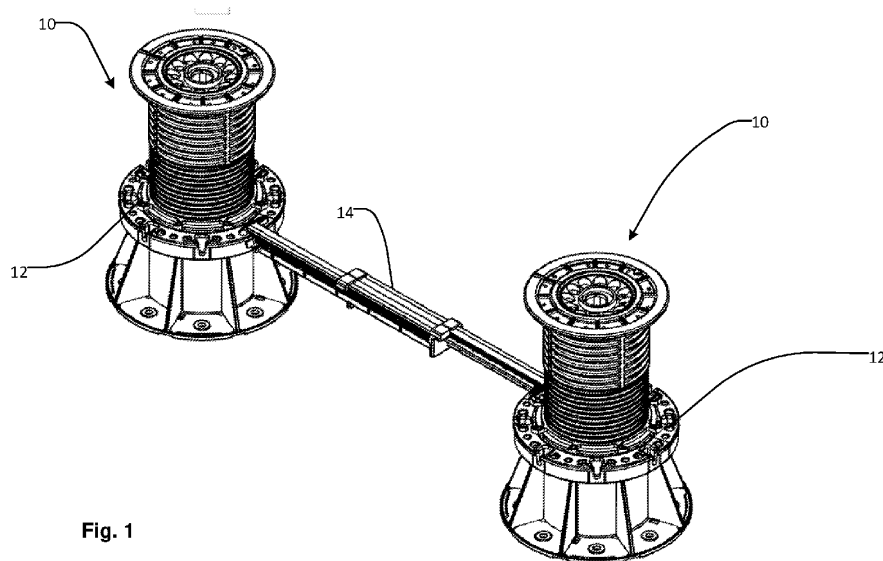

Fig. 1

(57) Abstract: Bracing for use with an adjustable pedestal comprises a collar (12) comprising at least two parts (30) for attachment around the exterior of the adjustable pedestal (10) and an adjustable brace (14) for connection between two such collars. When assembled the collar (14) defines a depending rim (34) in which is defined a series of at least four and preferably eight sockets (60) for receiving one end of the brace (14). The collar (12) comprises two identical generally semi-circular parts (30) which attach together around a threaded exterior of the pedestal to form a ring. The brace (14) comprises two identical elongate brace elements (80) which are located side by side and can be moved relative to each other and define formations at each end for engagement in the sockets of the collar.
