

# **Chair with Back-and-Forth Moving Backrest**

## **ABSTRACT**

A chair with a back-and-forth moving backrest comprises a seat and  
5 a backrest, the lower end of the backrest is separated from the seat;  
both sides of the lower end of the backrest are respectively connected  
with both sides of the back end of the seat by a rotating mechanism;  
the lower end of the rotating mechanism can be rotatably regulated  
relatively to the seat; the upper end of the rotating mechanism can  
10 be rotatably regulated relatively to the backrest; during the rotating  
regulation of the rotating mechanism, the backrest only moves back  
and forth relatively to the seat without changing the vertical state  
of the backrest.
