Method for producing polymeric, ionic imidazolium compounds

Abstract

- 5 Process for preparing polymeric, ionic compounds comprising imidazolium groups, wherein
- an α -dicarbonyl compound,
 - an aldehyde,
 - 10 - at least one amino compound having at least two primary amino groups,
 - if appropriate an amino compound having only one primary amino group and a
 - protic acid,
- where the carbonyl groups of the α -dicarbonyl compound and of the aldehyde may, if
- 15 appropriate, also be present as hemiacetal, acetal or hemiketal or ketal,
- are reacted with one another.
