

WALL-MOUNTED METERING DISPENSER

ABSTRACT

A wall-mounted metering dispenser for a liquid, having a replaceable container 1 and a wall bracket 2, and having a removal apparatus for removing liquid from the container in a metered manner. The wall bracket has a first fixing location 3 having a fixed retention element for the base region of the container, and a second fixing location 7 having a sleeve 8 which is separable from or movable relative to the wall bracket which retains the upper region of the container. The removal apparatus is arranged on or integrated in the sleeve and includes a metering pump having a pump chamber that is insertable in a container opening and an actuation element 10 having a liquid discharge opening 12 connected to the pump chamber. The actuation element is guided in the sleeve.
