Method for exchanging a courier transport message and dispatch system for carrying out the method

Abstract:

The present invention provides a method for exchanging a courier transport message by means of an electronic calendar information, comprising, a first electronic calendar information including a participation status, indicating a work item and updating the status of delivery as an electronic calendar information item compliant to a standard; a second electronic calendar information with an additional qualification information as the electronic calendar information item of definition additional to the standard; wherein an additional service is invoked in the case that an electronic standard compliant programme of a customer allows processing standard compliant electronic calendar information.
