

ABSTRACT

GROUP CHAT INITIATING METHOD ON BASIS OF SHARED DOCUMENT, DEVICE AND APPARATUS THEREFOR, AND STORAGE MEDIUM

Disclosed in the embodiment of the present disclosure is a group chat initiating method on the basis of a shared document, comprising: when a first user account accesses a shared document, querying the shared document to obtain a group-specific name card inserted therein, and in the shared document, according to a joining state of the first user account in a chat group, displaying a group chat control corresponding to the joining state, and in response to an operation of the user performed on the chat control, sending a corresponding group chat request for joining the chat group or displaying an interface of the chat group. The present invention enables joining a group chat or opening a chat window by operating a control in a shared document, optimizing channels of communication, reducing operation steps and addressing the technical problem in the prior art of low communication efficiency. Also disclosed in the embodiment of the present disclosure are a device for initiating a group chat on the basis of a shared document, an electronic apparatus, and a computer-readable storage medium.
