(54) Title: METHOD AND APPARATUS FOR SHARING CONNECTIVITY SETTINGS VIA SOCIAL NETWORKS

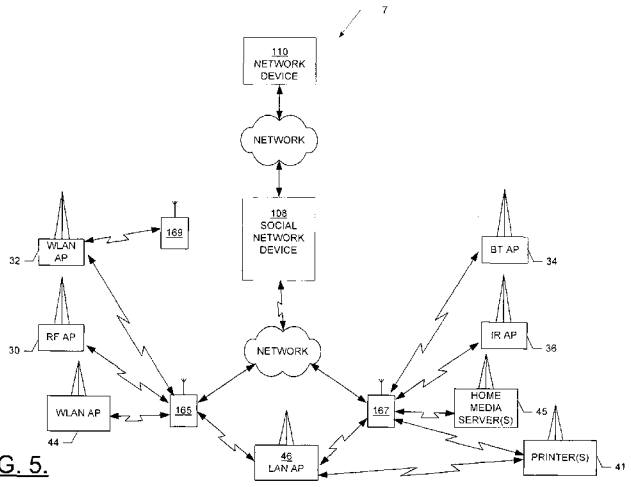

FIG. 5.

(57) Abstract: An apparatus for enabling sharing of one or more connectivity parameters with one or more friends may include a processor and memory storing executable computer code causing the apparatus to at least perform operations including detecting one or more connection parameters and associated data of at least one access point. The computer program code may further cause the apparatus to facilitate provision of the connection parameters and associated data for inclusion within at least one profile of a user. The profile may be associated with a social network service identifying one or more relationships among one or more determined friends of the user. The computer program code may further cause the apparatus to enable provision of the connection parameters and associated data to at least one device of the user or one or more devices of the friends. Corresponding methods and computer program products are also provided.
