

ABSTRACT
SPECTROSCOPIC MEASURING APPARATUS WITH MONITORING
CAPABILITY

A spectroscopic measuring apparatus with monitoring capability includes a first optical path L1 that extends
5 from a measuring object Sm through an optical system 30 and
a slit 23 of a slit-mirror block 21 to a spectroscope main
body 25 and a second optical path L2 that extends from the
measuring object Sm through the optical system 30 and a
mirror face 22 of the slit-mirror block 21 to a two-
10 dimensional photographing unit 40. The slit 23 and
spectroscope main body 25 are integrated into a
spectroscopic unit 20.
