ABSTRACT OF THE DISCLOSURE

MAGNETIC RECORDING AND REPRODUCING CONTROL APPARATUS

A magnetic recording and reproducing apparatus includes an input circuit, an identification information addition circuit, a recording circuit, a reproducing circuit, an identification information detecting portion, a storage circuit, a time stamp detection circuit, an output control circuit, a reset circuit and an output circuit, in which the identification information addition circuit adds the recording identification information to the digital signal for a given period where the recording circuit initiates recording the recording medium, and the reset circuit resets at least the control circuit upon detection of the recording identification information from the identification information detecting circuit.
