

Abstract

The invention relates to a hinge (1) for the pivotable attachment of a leaf (2) at an adjoining panel (3), the hinge (1) consisting of a hinge strap (5) attachable at
5 the leaf (2) and of another hinge strap (6) or a screw-on part (22) pivotably connected via a gudgeon (7) to the adjoining panel (3). In order to create a hinge (1) that forms a compact and visually pleasing unit at the least manufacturing and material expenses, while maintaining
10 the known variety of applications and functions, the leaf (2) and the adjoining panel (3) present, with regard to the hinge straps (5, 6), complementary openings (4) into which the hinge straps (5, 6) can be inserted from one side and on the opposite side they are screwable with a
15 counter-body (13) respectively, which can be inserted into the opening (4), while clamping the leaf (2), respectively the adjoining panel (3), the hinge straps (5, 6) and the counter-bodies (13) each presenting crowned frontal surfaces (10, 14).
