PATENT

G00002

PROCESS FOR PREPARING BATCH MATERIALS FOR THE
MANUFACTURE OF GLASS

Filed by: SAINT-GOBAIN VITRAGE

Inventor: Pierre JEANVOINE

ABSTRACT

The subject of the invention is a process for manufacturing compounds based on one or more silicates of alkali metals, such as Na and K and/or of alkaline-earth compounds such as MgO , CaO and/or rare earths, such as Ce, optionally associated with one or more silicates which combine the latter, by the action of heat and of hydrogen or generally of any reducing agent, into sulphates or nitrates of the said alkali metals and/or of the said rare earths and/or of the said alkaline-earth metals, such as $NaCl$, KCl or $CeCl_3$. The heat needed for the conversion is supplied, at least partly, by one or more submerged burners.

The subject of the invention is also an apparatus for carrying out the process and for its use.
