
System for operating a refuse container and method for operating a refuse container

5

Abstract

10 The invention relates to a system (1) for operating a refuse container (2), comprising a refuse container (2) which has an electronic control device (3) and a first communication interface (4) for sending and receiving data, wherein a first data transfer (10) to at least one further communication interface (8, 12, 15) can be initiated via the first communication interface (4), said further communication interface being provided in at least one further communication
15 device (9, 11, 14) which is not associated with the refuse container (2), wherein a further data transfer (38) between at least one internal device (27, 32, 33) can be initiated via the first communication interface (4), wherein the first (10) and the further data transfer (38) are based on a wireless technology.
