

ABSTRACT

“Method for locating available sites”

5

The invention relates to a method (200) for locating at least one available site from a plurality of sites, comprising the following steps:

- identifying (202) a predetermined number of available sites the closest to a reference position; and
 - 10 - displaying (210), in a display window the positions of said identified sites on a geographical map;
- characterized in that it comprises an automatic adjustment (208) of the display scale of said geographical map depending on:
- at least one dimension of said display window; and
 - 15 - at least one distance separating at least one of said identified sites from said reference position;
- such that said identified sites are all displayed in said display window.

20 It also relates to methods for reserving a vehicle, a parking space and a journey implementing such a location method.
