

Shooting Game Device with Personal Screen

Abstract

The invention comprises a game processing element, a table, a main screen, a plurality of personal operation elements and a plurality of personal screens, wherein the game processing element provides a shooting game, controls a game process of the shooting game and generates a main game picture. The main screen is arranged on the table and is used for displaying the main game picture. The plurality of personal operation elements are arranged on the table and are operated by a player to generate an operation signal to change the game process, the plurality of personal screens are arranged on the table and correspond to the plurality of personal operation elements one by one, and each personal screen respectively presents a corresponding personal game picture of the player. Therefore, the player can obtain personalized specific information such as game instructions, teaching guidance, game effects, scores and the like through the personal screen so as to meet the personalized use requirement.
