

Abstract of the Disclosure

A person tracking unit 15 image-processes the obtained thermographies in time series, tracks a high-temperature part, and thereby detects the person-
5 position. A memory unit 13 stores person detection information registered for each person in the division D, the person detection information including a pair of the person-position of the person detected by the person tracking unit 15 and person identifying
10 information identifying the person. A person determining unit 16 registers in the person detection information, in response to a detection request from a mobile terminal 22 connected via a communication line L2, a pair of a person-position of a person detected in
15 a person determining area N in the division D and person identifying information in the detection request.
