METHOD OF CORROBORATING INTERACTION BETWEEN PROFESSIONALS AND CLIENTS, AND A SYSTEM AND PLATFORM THEREFOR

ABSTRACT

The present invention provides a network based professional-client interaction platform for facilitating engagements and interactions between a processional and clients. The platform comprises an online accessible module having a User Interface (IU) where users interact thereon through a computer network; a user profile management module for managing professional users' profile and a client users' profiles, wherein the professional users a professional user profile data comprises information of particulars and professional credentials of the professional users; and a client user profile data comprises users' personal particulars, engagement history records and medical histories. Each professional is connected directly to a plurality of peer professional users connected at one level. Each client user is engaged with a professional user as main professional user to gain access to the peer professional users connected to that professional user as trusted associates. During interactions between the main professional user and the client user, the main professional user has main access to the user's personal particulars and service history records, and selectively release the information to the peer professional user.
