(54) Title: A Dimerizer Compound

(57) Abstract: There is provided a compound comprising at least two ligands that are individually coupled to a linker, wherein each ligand is independently selected from the group consisting of a substituted benzylguanine derivative, a substituted benzylcytosine derivative, a haloalkyl moiety, a drug, a peptide, a hormone, an inorganic compound and a protein. The compound may be part of an oligomer. The compound may be employed in a method of dimerizing a pair of proteins, which may alter a biological function in a cell. There is also provided a method of forming the compound.
