

ABSTRACT

There are provided a reflective mask having a coating film uniformly formed along the outermost surface and the side surfaces of a transfer pattern, having high EUV transmittance, and having high cleaning resistance and a production method therefor. To achieve the object, for example, a reflective mask (100) includes: a substrate (1); a multilayer reflective film (2) formed on the substrate (1) and reflecting an incident EUV light; an absorption layer (4) formed on at least a part of the multilayer reflective film (2) and absorbing the incident EUV light; and a coating film (5) formed on the multilayer reflective film (2) and on the absorption layer (4) and transmitting the incident EUV light, in which the coating film (5) has an extinction coefficient k of 0.04 or less to the EUV light, is resistant to cleaning with a cleaning chemical solution, and is formed with a uniform film thickness on the surface and the side surfaces of the absorption layer (4).
