(54) Title: COMPUTERIZED SYSTEMS AND METHODS FOR DECISION BASED CONSOLIDATION OF LARGE ORDERS FOR DELIVERY

FIG. 4

(57) Abstract: Embodiments of the present disclosure include computer-implemented systems and methods for package delivery. The method may comprise receiving a customer order, generating an order identifier, associating each item of the customer order with the order identifier, and determining a parcel count for the customer order. The method may further comprise causing the user-device to display a first indication to sort each item based on the storage space associated with the intended delivery destination, display a second indication to sort the sorted each item based on the delivery route, display a third indication to place the sorted each item into a container, without regard to a status of the other items of the customer order. The method may further comprise causing the user-device to display an indication to use an alternative delivery process based on the parcel count.
