HEALTHY LIGHT BLUB,

LEDs and FAR UVC for Lighting and Disinfection

ABSTRACT

The invention belongs to the technical field of lighting, and specifically discloses as a healthy light bulb. The healthy light bulb comprises a lampshade, a lamp body and a lamp socket, wherein a luminous LED light source is arranged in a space formed by the lampshade and consists of at least two of a warm white light emitting diode (LED) lamp, and an FAR UVC light; and the LED lamps are arranged on a lamp distribution board in the lampshade. The healthy light bulb sterilization lamp has the advantages of lighting and disinfection.
