(54) Title: PACKAGE WITH UNIQUE OPENING DEVICE AND METHOD FOR OPENING PACKAGE

**FIG. -2-**

(57) Abstract: A package and method for opening the package are disclosed. The package includes a first film (11) and a second film (12) forming an enclosure and at least one tab area (16) and defining a package periphery (18), the enclosure defining an interior volume configured to receive a product. The package further includes first and second breachable bubbles (20, 22) formed within first and second tab portions (24, 26) of the at least one tab area (16). Upon application of pressure by a user, the first and second breachable bubbles (20, 22) breach. The package may be alternated between a first position, wherein the first tab portion (24) and the second tab portion (26) are substantially sealed from each other to facilitate breaching, and a second position, wherein the first tab portion (24) and the second tab portion (26) are in fluid communication with each other.
