

ABSTRACT

Process for producing compounds comprising nitrile functions

The present invention relates to a process for producing compounds comprising at least one nitrile function by hydrocyanation of a compound comprising at least one non-conjugated unsaturation.

The invention proposes a process for producing compounds comprising at least one nitrile function by hydrocyanation of an organic compound comprising at least one non-conjugated unsaturation, comprising from 2 to 20 carbon atoms, by reaction with hydrogen cyanide in the presence of a catalytic system comprising a complex of nickel having the oxidation state of zero with at least one organophosphorus ligand chosen from the group comprising organophosphites, organophosponites, organophosphinites and organosphosphines and a cocatalyst of the Lewis acid type of formula

in which M1 and M2 represent elements chosen from the group comprising zinc, boron, aluminium, cadmium, gallium, indium and tin.
