

ABSTRACT

Provided in the embodiments of the present application are an information processing method and a related device. The method comprises: displaying an information retrieval interface, wherein the information retrieval interface is used for performing information retrieval on the basis of a query; displaying a subscription field, wherein the subscription field indicates a configured query; and outputting attention information related to the subscription field. The embodiments of the present application can enrich information retrieval modes, improve the flexibility of information retrieval, and can effectively adapt to a scenario in which an object continuously pays attention to information.
