

ABSTRACT

Embodiments of the present disclosure provide a method and apparatus for photographing media content, a device, a storage medium, and a program product. The method comprises: displaying a photographing page in response to a page display operation for the photographing page, and displaying prompt information associated with first media content in the photographing page, wherein the first media content is media content on which a user performs a preset feedback operation, the prompt information is used for displaying a target preview image of a target special effect, and the target special effect is a photographing special effect used in the first media content; and photographing second media content using the target special effect in response to a trigger operation for photographing using the target special effect.
