(54) Title: A HOST IMPLEMENTED METHOD FOR CUSTOMISING A SECONDARY DEVICE

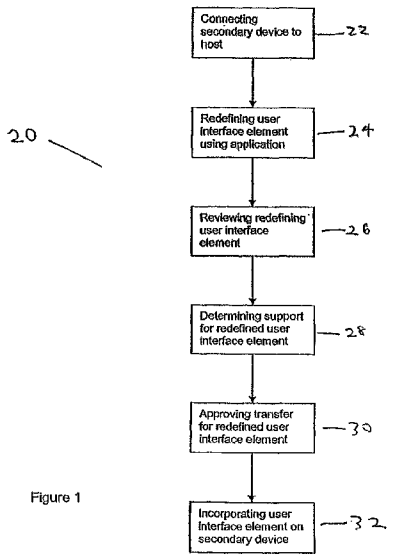

Figure 1

(57) Abstract: There is provided a host implemented method for redefining at least one user interface element on a secondary device. The method may include connecting the secondary device to the host for communication between the host and the secondary device; redefining the at least one user interface element using an application running on the host; reviewing the at least one user interface element as redefined using the application (possibly including a visual preview of the at least one user interface element as redefined when viewed on the secondary device); determining whether the secondary device is able to support the at least one user interface element as redefined using the application; and incorporating the at least one user interface element redefined using the application onto the secondary device.
