

IMAGE EDITING DEVICE AND METHOD

ABSTRACT:

An image editing device, and a method for editing images, which enable a plurality of image objects to be edited with reference to a time axis, which is displayed with
5 representations of the objects. Attribute data of the objects at different times in a sequence of images can be accessed and edited. The time axis display 22b includes time bars which allows a time representation of the object display 22a to be adjusted. Time intervals can be selected on the time axis display 22b and attribute data adjusted and saved for selected intervals.
