(54) Title: BREECHBLOCK ASSEMBLY FOR A FIREARM AND RELATED FIREARM

Fig.2

(57) Abstract: Breechblock assembly (3) for a firearm (1), comprising: a guiding element (31), in turn comprising a slide (314) adapted to slide along a guide (142) comprised in an actuation system (14) of the breechblock assembly (3) driven by a motor; a shutting element (35), adapted to shut an opening in a breech ring (12) of the firearm (1); and a percussion pin (34), which is pushed by an elastic element (332). The shutting element (35) comprising an axial hole (352) in which said percussion pin (34) is adapted to slide along a longitudinal axis (X), as a function of the firing cycle of the firearm (1) with which said breechblock assembly (3) may be associated. The percussion pin (34) being so shaped as to partially come out of said axial hole (352) of the shutting element (35) for firing a piece of ammunition. The breechblock assembly (3) comprises a control system (4) for controlling the percussion pin (34). The control system (4) being adapted to control the operability and the movement of the percussion pin (34) independently of a firing cycle of the firearm (1).
