(54) Title: C-SHAPED RING SEAL

## (57) Abstract

A seal (30) includes first and second axially opposite loops (32, 34) integrally joined together by a coextensive web (36) in a collective ring having a circumferential split. The two loops are arcuate in section, with radially outer and inner sealing lands (40, 42, 44, 46). And the web (36) is disposed radially between the outer (40, 44) and inner (42, 46) lands. The loops (32, 34) are disposed in corresponding grooves of adjoining members (24, 26) for effecting a seal therebetween and accommodating differential radial and axial thermal movement.
