Abstract

Flip-type Cover Assembly

A flip-type cover assembly 301, more particularly but not exclusively, for audio and/or video equipment is disclosed. In a described embodiment, the assembly 301 comprises a housing 303 defining an opening 210 and a cover 302 for the opening 210. The cover 302 is movably mounted to the housing 303 at two pivoting axes 307a, 310a, and the pivoting axes 307a, 310a are guided for movement by a cam path 306a having first and second movement axes 320a, 320b and another cam path 312a having corresponding first and second movement axes 321a, 322b, these axes defining different movement paths to guide the movement of the cover 302 between open and close positions.
