Crane Device and Method

ABSTRACT

Method, crane system and crane for moving a component of a device. The crane (60) includes a supporting mechanism (62) configured to be fixedly attached to the device (26), an arm mechanism (70) connected to the supporting mechanism (62) and configured to move in a horizontal plane, a sliding mechanism (80) connected to the arm mechanism (70) and configured to move substantially perpendicular to the horizontal plane, and a grabbing mechanism (90, 92) configured to be removably attached to the sliding mechanism (80) and configured to grab the component (36) of the device (26).
