

ABSTRACT

An electric lock device (20) disposed in a door of a home delivery box, wherein the electric lock device (20) is provided with an independent power supply unit (21) for each
5 home delivery box, an electric lock part (26) that unlocks the door due to electric power supplied from the power supply unit (21), a communication unit (27) that communicates with a portable terminal carried by a user of the home delivery box, a storage unit (25) that stores conditions for unlocking, and a control unit (23) that compares information received from the portable terminal by the communication unit (27) and the conditions for
10 unlocking as stored in the storage unit (25). The control unit (23) issues an unlock command to the electric lock part (26) when the information received from the portable terminal matches the conditions for unlocking.
