

ABSTRACT

ITINERARY DETERMINING METHOD, ITINERARY DETERMINING
COMPUTER PROGRAM, AND ITINERARY DETERMINING APPARATUS

An itinerary comparing apparatus receives a
5 designation of a plurality of sightseeing spots from a user
or the like. After that, the itinerary comparing apparatus
refers to an itinerary storage unit storing therein a
plurality of pieces of travel package product information.
Subsequently, the itinerary comparing apparatus extracts a
10 piece of travel package product information including the
plurality of sightseeing spots received from the user or
the like as destinations, by referring to the itinerary
storage unit. After that, the itinerary comparing
apparatus presents the piece of travel package product
15 information extracted from among the plurality of pieces of
travel package product information stored in the itinerary
storage unit, to the user or the like.
