DATA DISPLAY AND DATA DISPLAY METHOD

ABSTRACT:

A method of displaying data is described. The method includes sorting documents in a data set into a set of categories, assigning an indicia to each category, displaying each document as one or more respective cell comprising a respective indicia, grouping the cells comprising an identical indicia and displaying each group of the grouped cells as a component of a complex object. Also described is a data display comprising a complex object comprising one or more group comprising grouped cells, each group representing a category in a set of categories and comprising a plurality of cells comprising an identical indicia, each cell representing a respective document. A corresponding system for displaying data and a computer program product comprising a computer usable medium and computer readable program code embodied on said computer usable medium for displaying data are also described.
