Abstract

System and Method for Registering Payment Account Details on an Electronic Wallet for Subsequent Use

A system and method are presented for registering payment account details on an electronic wallet for subsequent use. The system and method comprise the following steps performed by a processor of a data aggregator server: receiving account information from a plurality of issuer servers, the account information comprising an account identifier and reference biometric data from a plurality of users; receiving from an electronic wallet of a said user, registration biometric data and an identifier for the electronic wallet; comparing the registration biometric data with the reference biometric data to identify the user and all the account information associated with the user; and transmitting to the electronic device, using the identifier, the account information associated with the user for registration on the electronic wallet for subsequent use.
