(54) Title: LOCAL STORAGE LINKED TO NETWORKED STORAGE SYSTEM

(57) Abstract: Disclosed are various embodiments for storage of files. A portable memory device is configured to couple to a computing device, and a storage management application is stored in the portable memory device, the storage management application being executable by a processor circuit. The storage management application is configured to send a plurality of files for storage in a networked storage system, the networked storage system being remote to the computing device. The storage management system caches a subset of the files on the portable memory device and maintains a local file directory in the portable memory device. The local file directory lists the files stored in the networked storage system in association with an account linked to the portable memory device.
