(54) Title: **REMOTE SIGNALLING SYSTEM**

(57) Abstract

A reservation system (10) for use with taxis or other vehicles (13) including a plurality of input terminals (14) located at different geographical locations. A coin, note or card inserted into the input terminal (14) causes transmission of a signal to a base terminal (11) which can identify the location of the input terminal (14). The base terminal (11) also transmits a signal to a taxi or other vehicle (13) in the vicinity of the activated input terminal (14) to enable a person to be collected from the terminal (14).
