

COMMUNICATION METHOD AND APPARATUS

ABSTRACT

A communication method and apparatus are provided, and relate to the field of communication technologies. The method includes: A format of a PPDU that may be sent by a first
5 UWB device to a second UWB device is determined based on a device type of the first UWB device and a type of the second UWB device, and the type of the second UWB device is indicated by first indication information. This indicates that the corresponding PPDU format may be determined between the first UWB device and the second UWB device without a complex interaction process. In other words, this simplifies an interaction procedure for negotiating a PPDU
10 structure, thereby reducing a communication delay.
