

BATCH ENCRYPTION METHODS, RELATED APPARATUSES, SYSTEMS, DEVICES, MEDIUMS, AND PROGRAM PRODUCTS

ABSTRACT

Embodiments of this specification disclose a batch encryption method, a related apparatus, a system, a device, a medium, and a program product. The method includes the following: N first plaintexts are obtained, and a first target plaintext obtained by splicing the N first plaintexts based on a first predetermined rule is encrypted by using a predetermined encryption algorithm, thereby obtaining a first target ciphertext including the N first plaintexts. N is a positive integer greater than or equal to 2.
