- S21 Acquire an information processing application sent by a first client, and execute a preset command via a timed task mechanism, so as to send, to a second client, a first prompt message for reviewing the information processing application
- S22 In response to an operation instruction on the second client, identify the information processing application as a target information processing application, wherein the operation instruction is triggered when a user of the second client determines that an amount of resources to be transferred in, which is transferred in by a user of the first client offline, has been received at a first target address
- S23 Acquire and process an information processing request for the target information processing application that is sent by the first client via an asynchronous mechanism
- S24 In response to the polling initiated by the first client, when the processing of the information processing request is completed, return a processing result of the information processing request to the first client

(57) Abstract: Provided are an information processing method and apparatus, and an electronic device and a storage medium. The method comprises: acquiring an information processing application sent by a first client, and executing a preset command via a timed task mechanism, so as to send, to a second client, a first prompt message for reviewing the information processing application; in response to an operation instruction on the second client, identifying the information processing application as a target information processing application; acquiring and processing an information processing request for the target information processing application that

is sent by the first client via an asynchronous mechanism; and in response to the polling initiated by the first client, when the processing of the information processing request is completed, returning a processing result of the information processing request to the first client.

(57) 摘要: 提供一种信息处理方法、装置、电子设备及存储介质, 该方法包括: 获取第一客户端发送的信息处理申请, 通过定时任务机制执行预设命令, 以向第二客户端发送对信息处理申请进行审核的第一提示消息; 响应第二客户端上的操作指令将信息处理申请标识为目标信息处理申请; 获取第一客户端通过异步机制发送的针对目标信息处理申请的信息处理请求, 对信息处理请求进行处理; 响应第一客户端发起的轮询, 在信息处理请求处理完成的情况下, 将信息处理请求的处理结果返回至第一客户端。
