

UNNATURAL AMINO ACID, AND USE THEREOF, RECOMBINANT PROTEIN CONTAINING SAME, AND RECOMBINANT PROTEIN CONJUGATE

Abstract

5 The invention provides an unnatural amino acid, which is a compound with a structure as shown in formula (I) or an enantiomer thereof. The invention further provides use of the unnatural amino acid. Furthermore, the invention further provides a recombinant protein containing the unnatural amino acid and a protein conjugate prepared from the recombinant protein. The unnatural amino acid provided by the invention is simple and convenient to prepare,
10 safe in nature, not easy to be inactivated when being inserted into a protein, and has a high binding rate with a coupling moiety, and the obtained conjugate is higher in stability. The unnatural amino acid provided by the invention is applicable to numerous fields, especially in preparation of a recombinant protein or a recombinant protein conjugate,
