

ABSTRACT
HEAD MASSAGER

There is provided a head massager which is lightweight and compact and yet massages without fail a to-be-massaged head region of a user who receives massage. The head massager (1) comprises the head cover body (5) for covering user (U)' s head and the massaging mechanism (6) for massaging user (U)' s head disposed in the head cover body (5). The head cover body (5) comprises the cap-shaped outer cover (7) and the inner cover (8) disposed inside the outer cover (7) to cover user (U)' s head. The massaging mechanism (6) is interposed between the outer cover (7) and the inner cover (8) and includes a plurality of tapping massage sections (9) and a plurality of pressing massage sections (10). The pressing massage sections (10) are coupled together by a bendable and/or stretchable belt member. The tapping massage sections (9) are situated on the bendable and/or stretchable belt member.
