

Abstract**DATA PROCESSING METHOD, DEVICE AND STORAGE MEDIUM**

5 A data processing method, comprising: a terminal device (120) reports switching time
capability to a network device (110), the switching time capability being used for data
scheduling of the network device (110) to the terminal device (120). The switching time
capability comprises: the switching time that the terminal device (120) is switched from a first
network to a second network, and/or the switching time that the terminal device (120) is
10 switched from the second network to the first network. The network device (110) comprises a
first network device and/or a second network device. Also disclosed are another data processing
method, a terminal device, a network device and a storage medium.
