

**INFORMATION PROCESSING APPARATUS
AND INFORMATION PROCESSING PROGRAM**

ABSTRACT

5 There is provided information processing apparatus. Extraction means extracts
features of a selected document from an inverted index in which documents and features of the
documents are associated. Retrieval means retrieves a document having any one of the features
extracted by the extraction means by the inverted index. Selection means selects a feature of
the features corresponding to a plurality of retrieval results by the retrieval means, the feature
10 having a high effect of narrowing down the retrieval results. Presentation means presents a
combination of the features selected by the selection means, as a retrieval condition.
