

WASHING MACHINE

ABSTRACT

5 A washing machine of the present disclosure includes washing machine body (11),
control device (27) vertically disposed on a back surface side of washing machine body (11);
and resin cover (32) configured to cover control device (27) and detachable from washing
machine body (11). In control device (27), power supply board (28) is disposed on
insulating non-combustible material sheet (30) in case (29) vertically disposed on the back
10 surface side of washing machine body (11), and power supply board (28) is covered with
metal cover (31). With this configuration, a risk of temperature rise of control device (27)
can be dealt with, resin cover (32) need not be made of a flame-retardant or non-combustible
material, so that a manufacturing cost can be suppressed.
