

Abstract

The invention relates to a floor spring having a housing for accommodating a closing mechanism, the housing being covered by a housing cover (1a) bearing a shaft of the closing mechanism which shaft is supporting a door or the like. With the intention to create a floor spring which, despite having a flat design, guarantees reliable operation, according to the invention it is provided that the housing cover (1a) presents a reinforcing shoulder (2, 3) at least at one peripheral area.
